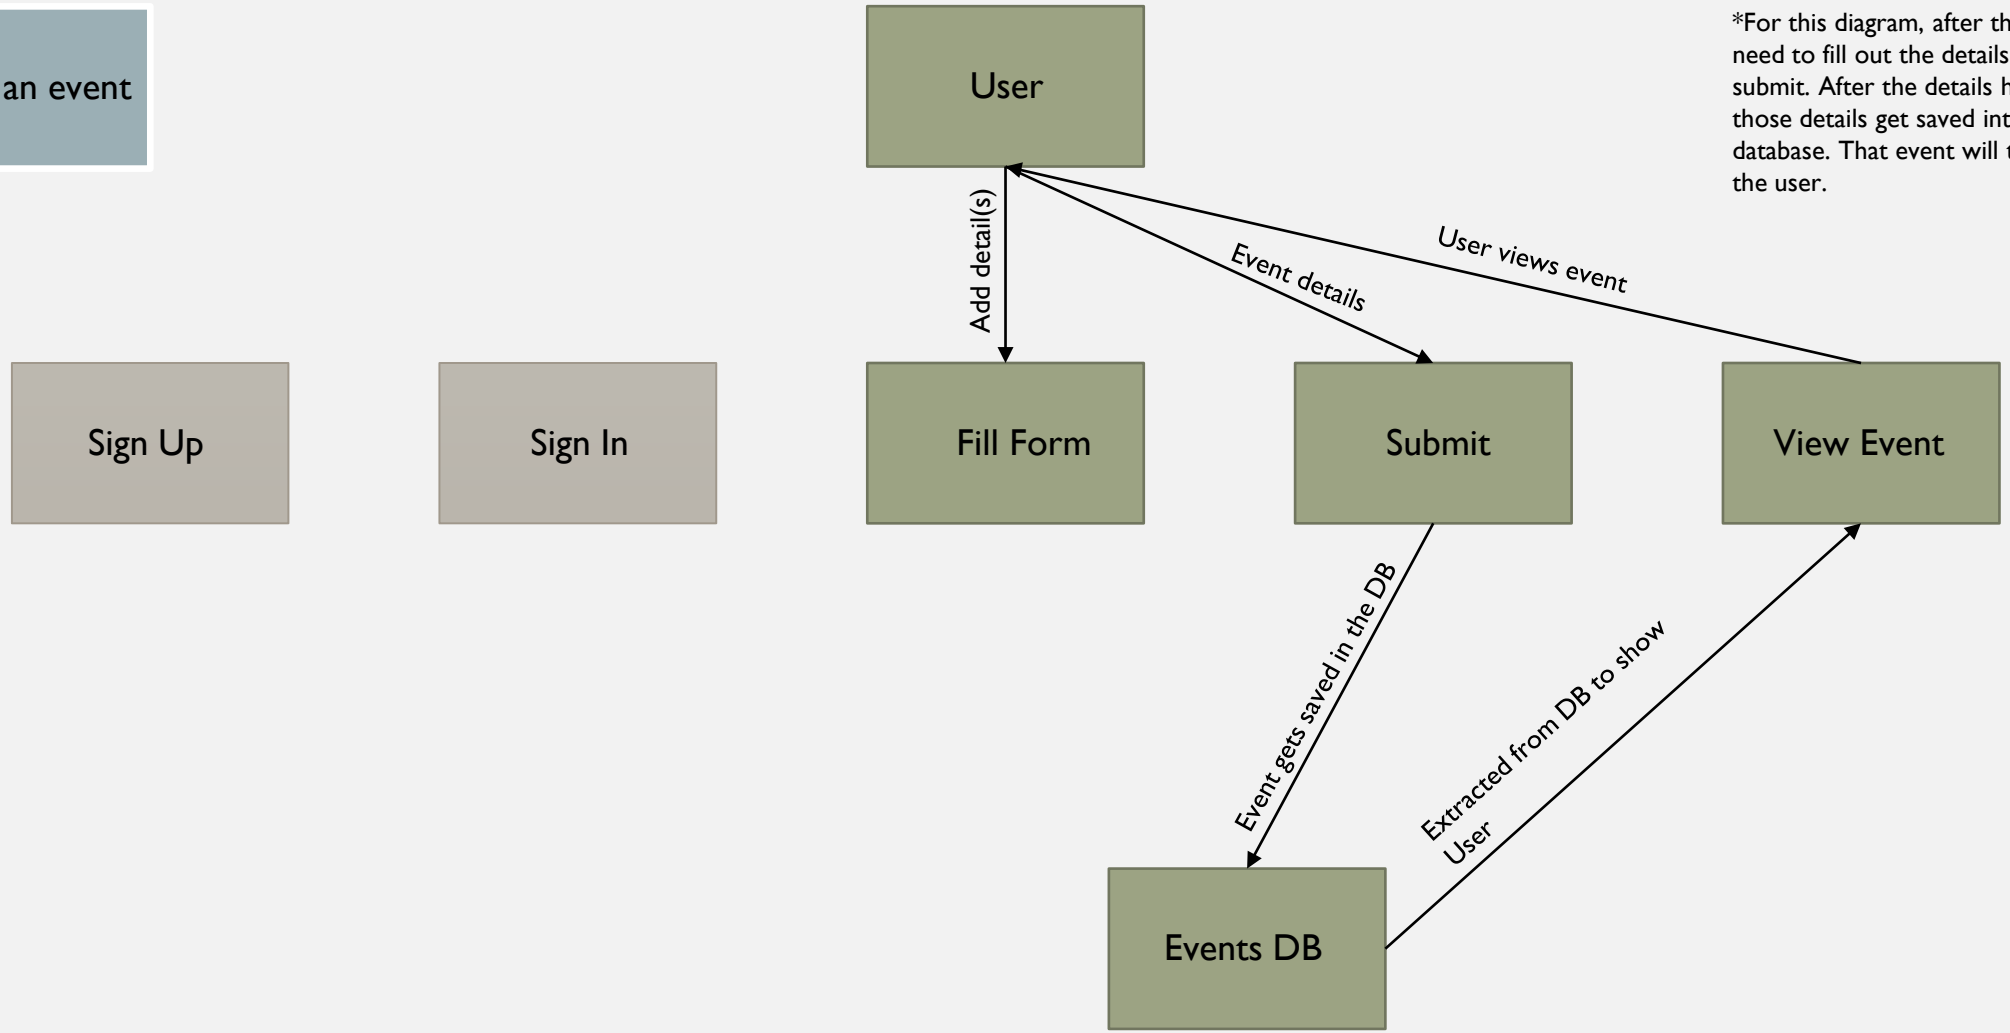
DATA FLOW DIAGRAMS

(data)

ADDING AN EVENT

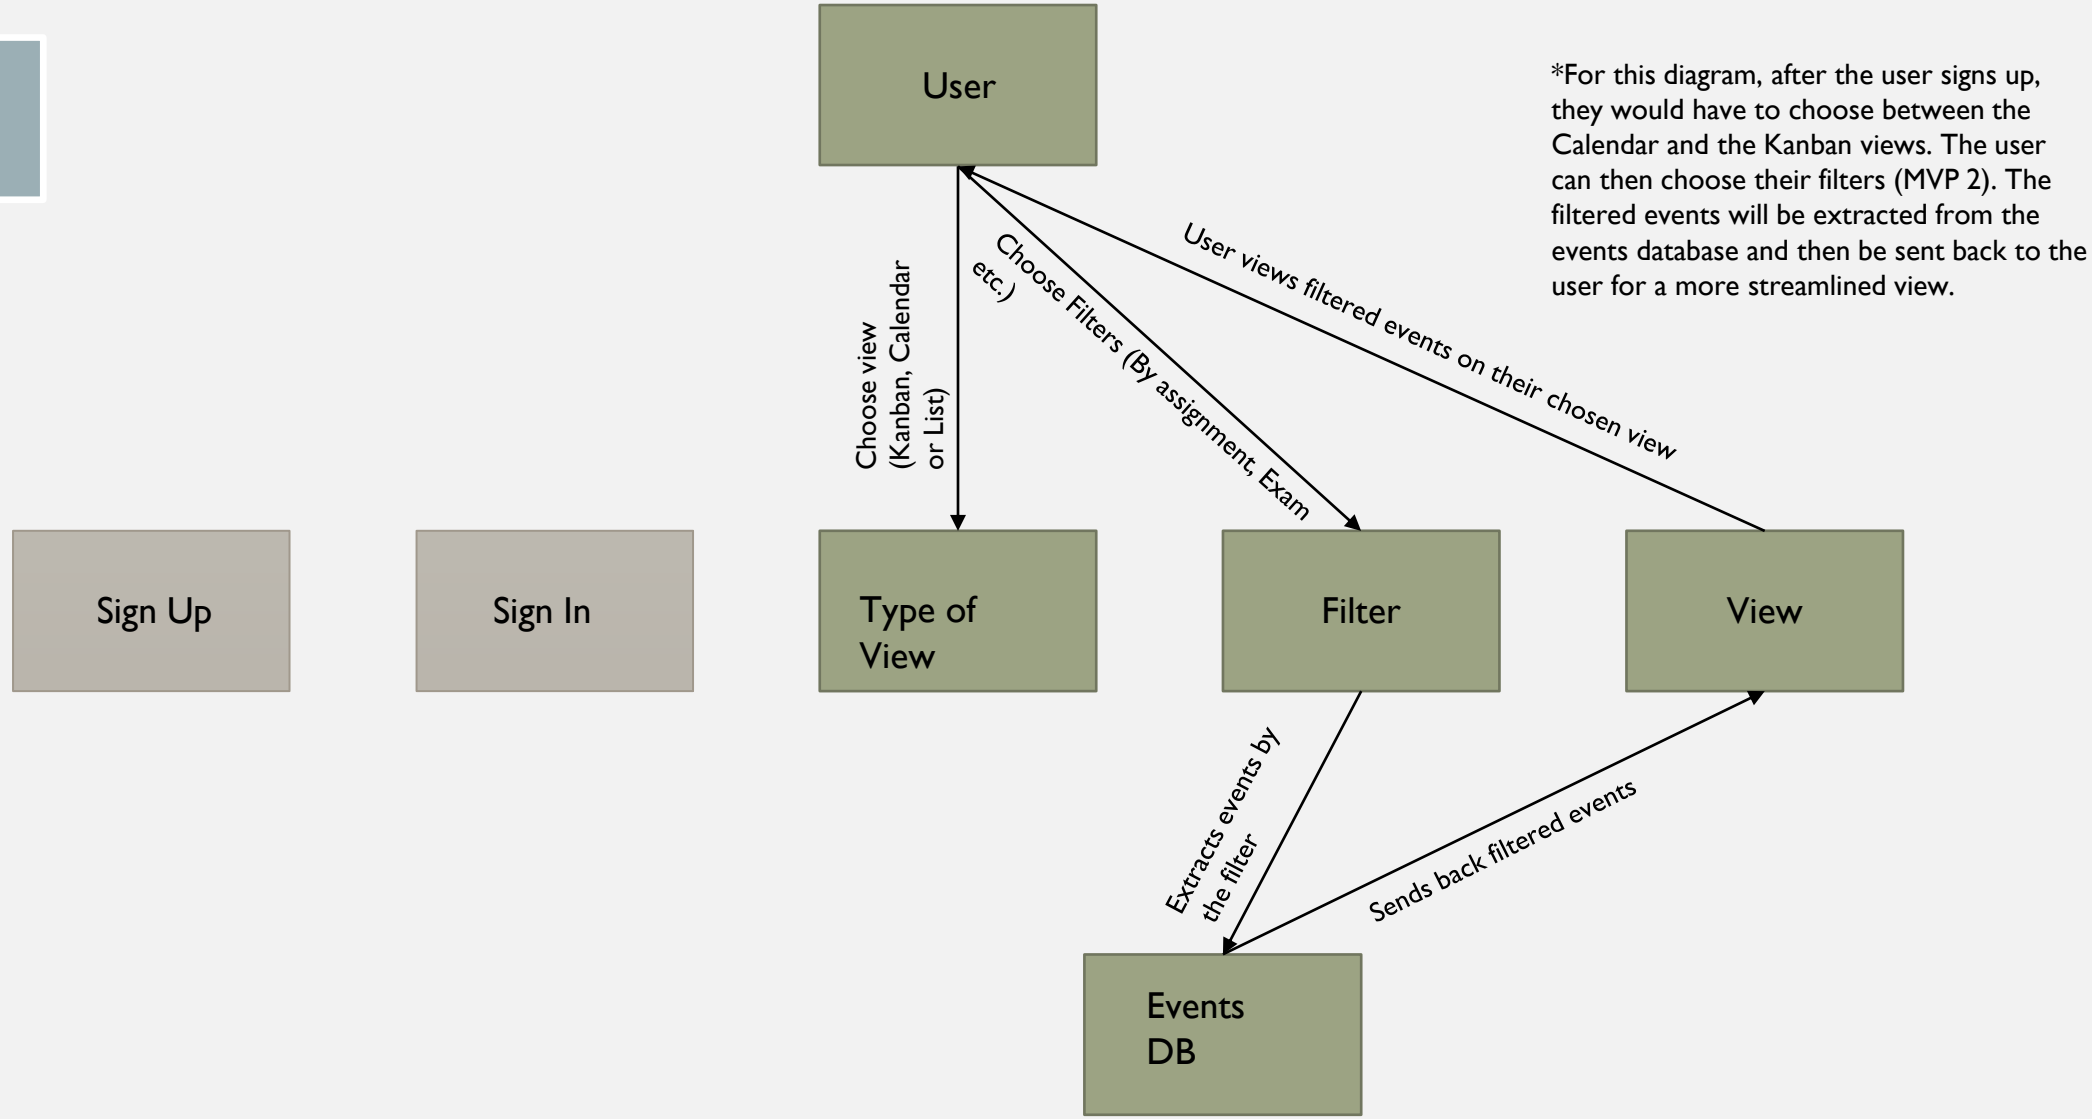
Adding an event



*For this diagram, after the user signs in, they need to fill out the details for their event and submit. After the details have been submitted, those details get saved into the Events database. That event will then be showed to the user.

VIEW AN EVENT

View an event



*For this diagram, after the user signs up, they would have to choose between the Calendar and the Kanban views. The user can then choose their filters (MVP 2). The filtered events will be extracted from the events database and then be sent back to the user for a more streamlined view.
