

# DATA FLOW DIAGRAM

Describes the flow of data in the application

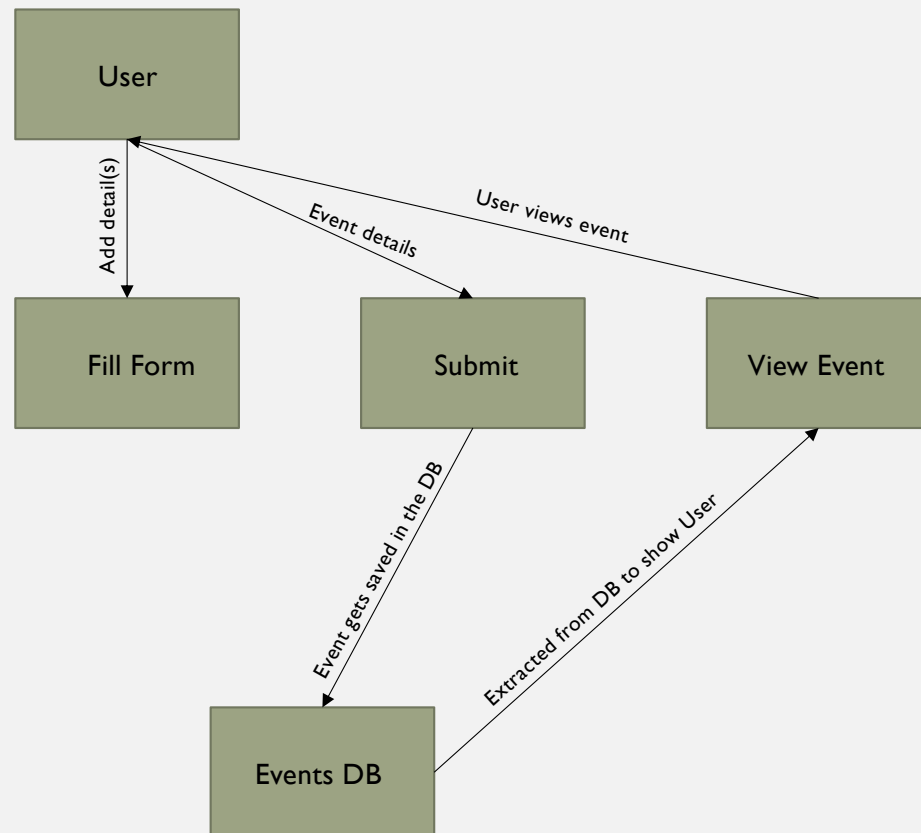

# ADDING AN EVENT

Adding an event

Sign Up

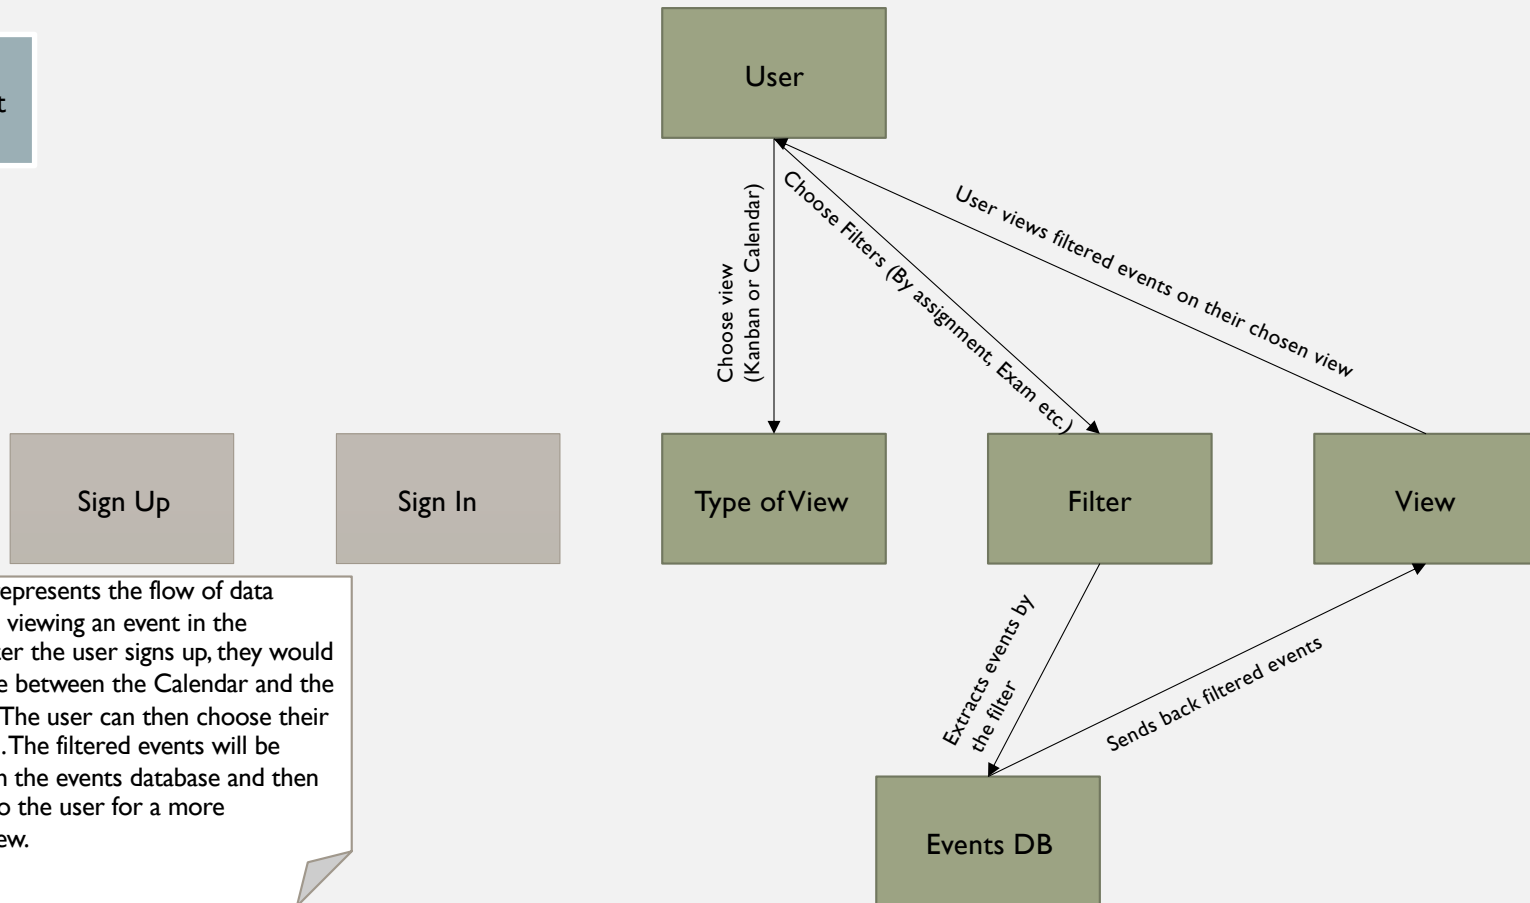

Sign In

For this diagram, it shows the flow of data when a user is adding an event. After the user signs in, they need to fill out the details for their event and submit. After the details have been submitted, those details get saved into the Events database. That event will then be showed to the user.

# VIEWING AN EVENT

View an event

This diagram represents the flow of data when a user is viewing an event in the application. After the user signs up, they would have to choose between the Calendar and the Kanban views. The user can then choose their filters (MVP 2). The filtered events will be extracted from the events database and then be sent back to the user for a more streamlined view.
